

Using IBM Rational DOORs (9.6.1)

This document attempts to replicate the latest "Using IBM DOORs" book (v. 9.2), which has been replaced by the IBM Knowledge Center. It does so by using the 9.2's book index and redirecting the user to the [IBM Knowledge Center](#) with the appropriate search query. The source code of this L^AT_EXfile can be found [here](#).

Chapter 1: About this manual

[Typographical conventions](#)

[Related documentation](#)

Chapter 2: Basics

[Starting Rational DOORs](#)

[Changing the Database Explorer display](#)

[Making selections in the Database Explorer](#)

[Selecting multiple items](#)

[Changing the appearance of the Database Explorer toolbar](#)

[Changing the appearance of the module toolbar](#)

[The Location field](#)

[Favorites](#)

[Organizing your favorites list](#)

[How changes to the database affect Favorites](#)

[Opening a module](#)

[Requesting a module lock](#)

[Rational DOORs URLs](#)

[Following a Rational DOORs URL](#)

[Making selections in a module window](#)

[Selecting multiple objects](#)

[Selecting everything](#)

[Using drag-and-drop](#)

[In the Database Explorer](#)

[In a module window](#)

[Cutting, copying and pasting](#)

[In the Database Explorer](#)

[In a module window](#)

[Closing a module](#)

[Stopping Rational DOORs](#)

Chapter 3: Managing formal modules

[Creating a formal module](#)

[Controlling access to a formal module](#)

[Creating a new module using paste special](#)

[Showing module properties](#)

[Showing module statistics](#)

[Deleting, undeleting and purging a module](#)

[Managing open modules](#)

Chapter 4: Editing

Edit modes

Changing the edit mode

Editable sections

Setting up a module for sharing

Working in shareable edit mode

- Saving changes when editing in shareable mode

- Colors of locked and unlocked sections

Requesting a section lock

In-place editing

- Selecting and editing

- Formatting text

- Cut, copy and paste

Editing using the object properties sheet

Undoing edits

Extended undo

Saving your changes

Creating objects

Controlling access to an object

Promoting and demoting objects

Swapping Object Heading and Object Text attributes

Splitting Object Heading from Object Text

Deleting, undeleting, and purging objects

The spelling checker

Checking spelling

Inserting symbols

Inserting URLs

Inserting templates

Splitting objects

Copying objects

Merging object text

Chapter 5: Editing using forms

Forms

Creating a new form

Editing forms

Running forms

Deleting forms

Chapter 6: Using views

Views

Saving your current view

Inheritance in views

- Views inheritance and access controls

Setting default views

Editing a view

Controlling access to a view

Deleting a view

Chapter 7: Finding, filtering and sorting

Searching the database

Finding text in a module

Finding and replacing text

Going to a particular object

Filters

- Simple filters

- Advanced filters

Using a simple filter

- Statistics

Using an advanced filter

- Statistics

Applying filtering to the Module Explorer

Turning filtering on and off

Sorts

Sorting

Turning sorting on and off

Searching with regular expressions

Chapter 8: Using attributes

System attributes

Showing attribute types

Creating an attribute type

Controlling access to an attribute type

Editing an attribute type

Deleting an attribute type

Showing attribute definitions

Creating an attribute definition

- Creating a new DXL attribute

Controlling access to an attribute definition

Controlling access to an attribute value

Editing an attribute definition

- Editing a DXL attribute definition

Sharing attribute and type definitions

Deleting an attribute definition

DXL attributes and layout DXL columns

Copying attribute values

Measuring the frequency of attribute values

Chapter 9: Viewing data in formal modules

Navigating using the keyboard

The view menu

The Module Explorer

Display modes

Changing the display mode

 Selecting the attributes shown in graphics mode

Controlling display levels

Controlling table attribute display

Outlining

Compression

Working with columns

Showing column information

Adding a column

Editing column information

Color-coding your data

Adding a graph column

Adding an icon column

Chapter 10: The Module Comparison Wizard

What is the Module Comparison Wizard used for?

How does the Module Comparison Wizard work?

Running the Module Comparison Wizard

The redline markup column

Chapter 11: Working with tables

Tables

Creating a table

Inserting a module as a table

Inserting rows

Inserting columns

Changing table properties

Deleting, undeleting and purging tables

Chapter 12: Working with pictures and OLE objects

Working with pictures

OLE objects

Activating and deactivating an OLE object

Inserting a new OLE object

Inserting an existing file as an OLE object

Resizing OLE objects

Cutting, copying and pasting OLE objects

Editing OLE object properties

Deleting OLE objects

OLE objects and history

Setting the OLE open limit

Registered and Unregistered OLE Objects

Actions affected by changes to the handling of OLE objects

- Edit in-place or using the object properties sheet.

- Copy and paste in-place or using the object properties sheet

- Cut and paste in-place or using the Object properties sheet

- Copy or cut a Rational DOORS object containing an unregistered OLE object in an attribute 177

- Copy objects using the Object Copier

- Change Proposal System

 - Submit a change proposal

 - Review change proposals

 - Apply change proposals

- DXL

- History

- Split Object

- Export data from Rational DOORS

- Paste unregistered OLE objects into other applications

- Spelling checker

Actions unaffected by changes to the handling of OLE objects

- Merge Objects

- Create a Baseline

- Copy a baseline

- Clone a module

- Cut or Copy modules in the Database Explorer

- Import data to Rational DOORS

- Archive and restore

- Partition/Rejoin

- Find and Replace

- Linking

Chapter 13: Access rights

About access rights

- Full access and no access

About groups

How group rights and user rights interact

- When you are in several groups

About inheritance

Inheritance example

Propagating extra access rights with create

Chapter 14: Managing folders

- Creating a folder
- Controlling access to a folder
- Editing folder properties
- Deleting, undeleting and purging a folder
- Managing locks

Chapter 15: Links

- Links
- External links
- Link arrows
- Creating links
 - Using drag-and-drop
 - Explicitly defining the link start
- Creating and editing external links
- Clearing the link start
- Link modules and linksets
 - Rational DOORS Links, the default link modules
 - Why use other link modules?
- Controlling access to a link module
- How copy and move affect links
- Editing links
- Creating link attributes
- Deleting links
- Creating links in bulk
- Linking by attribute
- Link module defaults
 - Changing the default link module
- Creating default linkset pairings
- Control on links for process management
- Showing link module information
- Creating a link module
 - Working with link modules
- Creating a linkset
- Deleting a linkset

Chapter 16: Discussions

- About discussions
- Controlling access for discussions in a module
- Creating a module discussion
- Viewing a module discussion
- Adding a comment to a module discussion
- Closing a module discussion
- Deleting a module discussion
- Reopening a module discussion
- Creating an object discussion
- Viewing an object discussion
- Adding a comment to an object discussion
- Closing an object discussion
- Deleting an object discussion
- Reopening an object discussion

Chapter 17: Tracking changes and traceability

- Change bars
- Showing module history
- Redlining
- Link analysis
- Running a link analysis
- Traceability columns
- Adding a traceability column
- Using the traceability explorer
 - Navigating
- Suspect links
- Showing suspect links
 - Filtering on suspect links
 - Displaying suspect link indicators
 - Displaying the last change
 - Displaying all suspect link information
- Clearing suspect links
 - Access rights required for clearing suspect links
 - Using the Clear function
 - Using the clear all function
- Checking data against history

Chapter 18: Using baselines

- Baselines
 - Using baselines to improve performance
- Viewing a baseline
- Baselining groups of modules
- Creating a baseline
- Copying a baseline
- Comparing baselines
- Deleting a baseline

Chapter 19: Using Electronic Signatures

- Viewing signatures
- Signing a baseline
- Including signature information in printouts

Chapter 20: Printing reports

- Applying saved page setups
- Creating page setups
- Printing a module
- Using print preview
- Creating a report
- Printing and managing reports

Chapter 21: Importing

Importing from Microsoft Word

Editing imported Word style information

Importing plain text files

- Basic import options

- Controlling text decomposition

- Attribute value assignment

- Advanced importing options

- Controlling list import

- Capturing embedded data

- Controlling line breaks and Chapter numbering

- Importing plain text

- Using the import plain text advanced options

- Adding and removing keywords or abbreviations

Importing RTF files

Importing spreadsheet files

- Importing a spreadsheet or database file

- Defining attribute lists for import

- Using attribute list elements for import

- Loading saved attribute lists for import

- Choosing attribute types

Importing FrameMaker files

- Importing a MIF file

- Using the import MIF advanced options

Chapter 22: Exporting

Exporting to Microsoft Word

Exporting to Microsoft Excel

Exporting to Microsoft Outlook

Exporting to Microsoft PowerPoint

Exporting to HTML

Exporting to plain text

Exporting to RTF

Exporting to spreadsheet

Exporting to FrameMaker

Chapter 23: Using the Change Proposal System

The Change Proposal System

Change proposals and suggestions

Change proposal roles

Change proposal partner modules

Duplicate sets

Groups

Creating groups

Editing groups

Submitting a change proposal

Submitting a suggestion

The review process

Showing and reviewing individual change proposals

Showing and reviewing groups

Showing and reviewing suggestions

Showing information about change proposals

Managing duplicate sets

Checking the approved changes

Applying the approved changes

Chapter 24: Using Rational DOORS to manage your testing

Test Tracking

Creating a test definition

Updating test definitions

Creating a form for recording test results

Preparing the module for a test run

Running tests

Comparing test runs

Chapter 25: Using descriptive modules

Descriptive modules

Controlling access to a descriptive module

Marking up a descriptive module

Extracting marked up objects

Showing descriptive module properties

Displaying marked up items only

Chapter 26: Configuring Rational DOORS

Showing your user options

Display schemes

High contrast display schemes

Changing your display scheme

Display scheme items

Items that affect Print Preview

Configuring the spelling checker

Available languages

Grammar

Checking options

Default language selection in Rational DOORS

Adding words to the dictionary

Using the command line

Summary of command line switches

Using shortcuts

Settings in the registry

The EXPORTDIRECTORY keyword

The EXPORTDIRECTORY environment variable

Running Rational DOORS in batch mode

Configuring the Welcome Screen

Configuring Home

Configuring the links on the Welcome Screens

Changing the email address of the problem report

Chapter 27: Rational DOORS buttons

Module buttons

Database buttons

Chapter 28: Using DXL

DXL

Developing DXL programs

Browsing the DXL library

Converting layout DXL to attribute DXL

Chapter 29: Keyboard shortcuts

CTRL keys

Rich text

Function keys

Keypad keys

Navigation Keys

Chapter 30: Contacting support

Contacting IBM Rational Software Support

Prerequisites

Submitting problems

Other information

Chapter 31: Notices

Trademarks

Text proofing system copyrights
